Allenix

How we work with *Claude.*

A field guide for the Millennium Tours team.
What Claude is, how to use it every day, and where to aim it first.

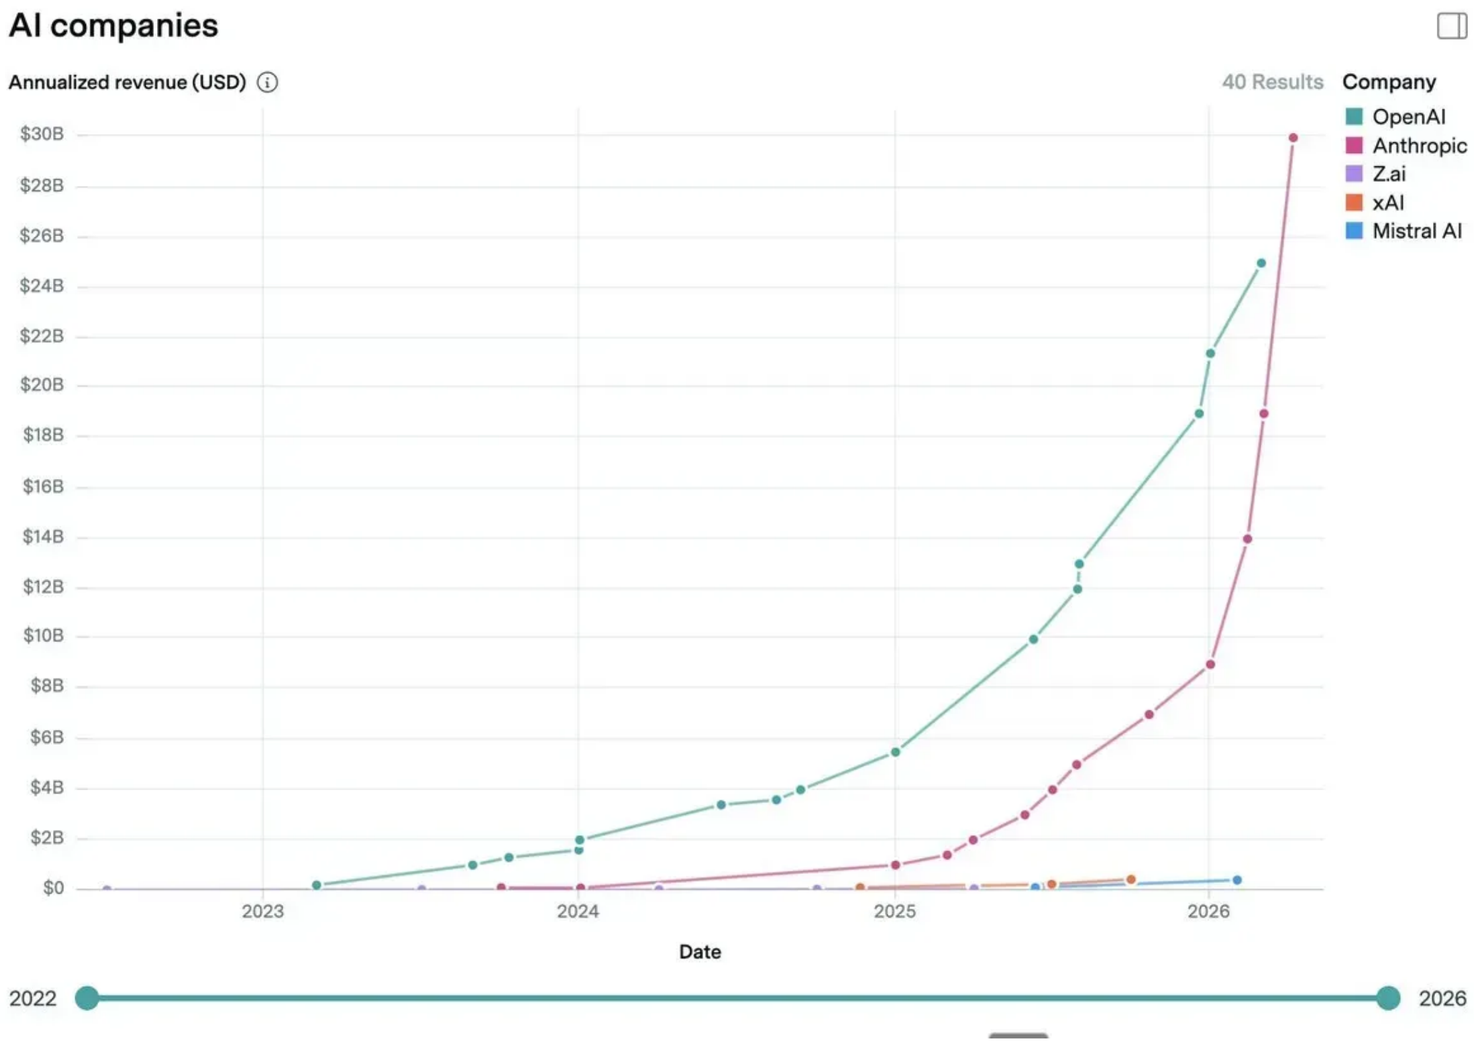
PREPARED BY ALI MAMUJEE

Agenda.

- Quick Intros
- Why Claude
- Basic Training & Awareness
- What has been built out
- Explore what is next

Goal: Use Claude everyday, see the power in it, and improve the business.

Anthropic is the *fastest-growing* company in history.



What's driving it:

- An AI that writes code for you
- A digital coworker for any job
- Plugs into tools you already use

Millennium Tours summarized feedback from the team.

	AREA	WHAT IT MEANS FOR MILLENNIUM TOURS
01	**Document consistency**	Master templates so proposals, invoices, T&Cs, and itineraries look identical regardless of who built them.
02	**Faster client emails**	Draft-ready group quotes, follow-ups, and replies in seconds instead of written from scratch each time.
03	**Passenger data accuracy**	Automated verification of names, passports, and dietary info before tickets are issued to cut manual errors.
04	**Cleaner invoicing**	Standard land and air invoice formats with inclusions, exclusions, and payment schedules spelled out every time.
05	**Contract discipline**	Consistent client T&Cs plus active tracking of airline contract deadlines so nothing expensive slips through.
06	**Workflow automation**	Standardized intake for new university requests and automated payment notifications tied to the accounting database.

You get *one* AI tool. We chose Claude on purpose.

Claude is built for work that has to be right the first time.
Client emails. Contracts. Passenger data. Invoices.

ACCURACY

Lowest hallucination rate of any major model.

Claude is engineered to say "I don't know" instead of guessing. For a business built on itineraries and contracts, that matters more than speed.

TONE

Writes like a professional. Not a chatbot.

Independent evaluations consistently rank Claude first on written English. No emoji spam. No "Certainly! Here is." Client-ready on the first pass.

SECURITY

Your data is not used to train the model.

Enterprise plans include SSO, audit logs, and zero-retention. Passenger PII, payment details, and airline contracts stay in your tenant.

Three surfaces. Know which one you are in.

Ping Pong

Chat

You ask. Claude answers. Everything stays in the chat window.

FOR MILLENNIUM

- Client emails in Outlook
- Itineraries from scratch
- Airline hold requests

Action

Cowork

Claude works inside your real OneDrive folders. It creates files, not just text.

FOR MILLENNIUM

- Processing invoice folders
- Building Word reports
- Organising trip documents

Build

Code

After you've mastered Cowork, Code is where you build custom tools for the agency.

FOR MILLENNIUM · LATER

- A custom Trip Tracker app
- One-click client report builders
- Automations only Millennium needs

Four features worth knowing. Ignore the rest for now.

PROJECTS

A workspace that remembers you.

Upload your templates, voice guide, and airline contracts once. Every chat starts already knowing Millennium.

USE FOR: ALL WORK TASKS

SKILLS

Instructions Claude remembers forever.

Write the rule once. "Always use Millennium invoice format." Claude follows it every time.

LIKE TRAINING A NEW HIRE

CONNECTORS

The pipe to Microsoft 365.

Connect Outlook, OneDrive, SharePoint, and Teams. No more copy-pasting.

MONTH 1 PRIORITY

PLUGINS

Bundles of skills and connectors.

Pre-built kits for a job. Travel ops. Client email. Finance and invoicing.

MONTH 2 AND BEYOND

A structure for every prompt that matters.

A	**Authority**	Tell Claude who you need it to be. `Be world class [Role].`
G	**Goal**	State the outcome in one sentence. `Your task is to [OUTCOME].`
E	**Evidence**	Who it is for. Relevant background. Tone and voice.
N	**Needs**	Length. Structure (bullets, paragraphs, table). Any specific sections required.
T	**Terms**	Do’s and Dont’s. Do not proceed unless you are 95% confident. Ask one clarifying question if anything is unclear."

A Millennium Tours prompt, written the right way.

A · Authority. You are a world-class travel operations consultant at Millennium Tours, writing to a university procurement officer.

G · Goal. Your task is to draft a follow-up email that secures a signed contract for a 42-student Italy program by Friday.

E · Evidence. I copy /pasted the email below. The prospect is Dr. Lin at Trinity University. We quoted on March 14. She asked about insurance and cancellation terms in her last reply. Millennium voice is warm, precise, confident. Not casual, not corporate.

N · Needs. Three paragraphs. First paragraph warm recap. Second paragraph directly answers insurance + cancellation. Third paragraph offers a 15-minute call and names two time slots this week.

T · Terms. AVOID: em dashes, the word "journey," generic AI phrasing, promises we cannot keep. Do not proceed unless you are 95% confident. Ask one clarifying question if anything is unclear.

My Claude best practice *maxims.*

01

When in doubt, ask Claude.

The biggest barrier is not thinking to use it.

02

Screenshots are your best friend.

Claude reads images. Show it what you see.

03

Brief Claude like a smart new hire.

Vague input gets vague output. Every time.

04

State the outcome before the steps.

Tell Claude what you want, not how to do it.

05

Check the work.

First draft, not final answer. Claude is confident even when wrong.

06

Plan. Plan. Plan. Execute

Measure twice, cut once applies to AI

07

Share what you learn.

Five people learning together beat five learning alone.

08

Claude is step one, not a side quest.

Open it before Word, before email, before anything.

LIFT: 3–6 HOURS / PERSON / WEEK

Start here. Quick wins in *Chat.*

01 **University follow-up emails** CHAT

Draft replies to procurement, academic advisors, and trip leads. Claude reads their last message and writes in Millennium voice.

---

02 **First-pass itinerary drafts** CHAT

From a half-page brief, generate a day-by-day itinerary with inclusions, exclusions, and meal notes.

---

03 **Vendor & airline hold requests** CHAT

Write precise, courteous hold requests. Includes deadlines, group sizes, and fare class specifics.

---

04 **Traveller support replies** CHAT

Respond to common passenger questions. Baggage, visas, dietary, itinerary changes.

---

05 **"What am I missing?" on a contract** CHAT

Paste an airline or vendor contract. Ask Claude to flag anything that could cost money later.

---

06 **Voice & tone cleanup** CHAT

Paste a draft written by a junior. Claude rewrites in Millennium voice while keeping the content.

Department workflows in *Cowork.*

07 **Invoice reconciliation from a folder** COWORK

Point Claude at a OneDrive folder of airline and vendor invoices. It produces a reconciliation sheet and flags mismatches against your bookings.

---

08 **Passenger manifest builder** COWORK

From vendor confirmations and intake forms, generate clean Word manifests per trip. Passport numbers, dietary, room pairings, verified.

---

09 **Proposal factory** COWORK

Drop 12 intake forms in a folder. Get 12 branded Millennium proposals out. All identical in format, unique in content.

---

10 **Airline contract deadline tracker** COWORK

Scan your contracts folder monthly. Output a Word memo listing every expiry, option deadline, and minimum-pax clause in the next 90 days.

---

11 **Trip file bulk-rename & organise** COWORK

Apply the Millennium naming convention across a messy drive. Files grouped by trip, client, year.

---

12 **Monthly brand sweep** COWORK

Cowork flags off-brand files in your outgoing doc folder. Wrong logo, footer, or T&Cs version.

REQUIRES ALLENIX BUILD SUPPORT

Built systems. *Only if* the ROI is obvious.

13	**University intake portal** A simple branded form. Requests land, Claude drafts a first-pass proposal automatically, a human reviews and sends. Cuts intake-to-quote to under 24 hours.	CODE
14	**Passenger data verifier** A small tool that checks passport names against tickets, dates against itineraries, and dietary info against manifests. Runs before every ticketing deadline.	CODE
15	**Payment-notification agent** Connected to your accounting database. When a payment is due, overdue, or received, the right email goes out automatically in Millennium voice.	CODE
16	**Itinerary-to-invoice generator** One approved itinerary produces the client proposal, the land invoice, the air invoice, the T&Cs, and the passenger manifest template. In one pass.	CODE
17	**"Magnolia" ops dashboard** The control panel for the three above. What is live, what is stuck, what needs a human. The internal system that runs under everything else.	CODE

Appendix

You can review this on your own time

Why not ChatGPT, Gemini, or Grok?

WHERE IT MATTERS	CLAUDE	CHATGPT	GEMINI	GROK
Business writing quality Client-ready email, proposal prose	Best in class	Good, generic	Corporate, stiff	Casual, off-brand
Long-document handling Contracts, itineraries, multi-file	200K tokens	128K	1M (shallow)	128K
Hallucination rate Lower = safer for client work	Lowest	Medium	Medium	Highest
Works on your real files OneDrive, Outlook, SharePoint	Yes · Cowork	Partial	Google only	No
Enterprise data privacy Zero-retention, no training on your data	Default on	Opt-in	Opt-in	Limited

Chat is a *thinking partner.* Not a file system.

USE IT LIKE

A senior colleague sitting next to you. You hand them a half-finished draft or a vague problem. They give you something you can use in sixty seconds.

- Draft a follow-up email to a university procurement contact
- Rewrite this itinerary in a friendlier voice
- What am I missing in this airline contract?
- Turn these five bullet points into a quote summary

YOU → A university group of 42 students needs a Rome–Florence–Venice itinerary, 7 days, moderate budget. Land-only. Draft a proposal in our Millennium voice.

CLAUDE → Returns a formatted proposal with day-by-day inclusions, exclusions, inclusions table, and a paragraph on travel insurance. You edit the last 20%.

Cowork is a *colleague with hands.* It touches real files.

USE IT LIKE

An ops assistant who can open a OneDrive folder, read every file inside, and produce a cleaned-up deliverable. Word docs. Excel sheets. Renamed files.

Read 40 airline invoices, output a reconciliation sheet
Take 12 intake forms, generate 12 branded proposals
Bulk-rename trip files to the Millennium convention

GROUND RULES

Three things to know.

Desktop app required. Cowork only works in the Mac / Windows Claude app, not the browser.

It asks permission. Before writing or overwriting anything, Claude confirms with you.

Start small. Point it at one folder, one task. Not your whole drive.

A Project is a *folder with a brain.*

A workspace where Claude remembers everything about one area of your job: files, instructions, and shared context across every chat inside it.

HOLDS FILES

Reference docs stay loaded.

Vendor lists, templates, contact sheets, and contracts live inside the project. Always available, never re-uploaded.

CUSTOM INSTRUCTIONS

Rules for this work.

"Always use our preferred Jordan vendors." "Voice is warm but precise." Claude follows them in every chat inside the project.

SHARED CONTEXT

New chats start informed.

Open a fresh conversation in the project — Claude already knows the background. No re-briefing every time.

At Millennium: create a "University Programs" project with the contact list, itinerary templates, and "use preferred vendors in Jordan" as instructions. Anyone opening a new chat in it already has the full picture.

A Skill is a *recipe card.*

A reusable instruction that produces the same kind of output, every time — invoice, follow-up email, manifest — regardless of which project you trigger it from.

REPEATABLE

Same process. Same quality.

A defined recipe means the output looks the same whether it ran on Tuesday or six months from now.

PORTABLE

Works anywhere.

Inside any project. Outside any project. The skill goes wherever the work is — that's the point.

TASK-SPECIFIC

Does one thing well.

An invoice. An email. A manifest. A skill is narrow on purpose — that's what makes it dependable.

At Millennium: build an "Invoice Generator" skill that takes a client name, trip details, and line items and returns a formatted Word doc. Trigger it from University Programs, Corporate Travel, or no project at all — same result.

Side by side. Two tools, two jobs.

	PROJECT	SKILL
Think of it as	A folder with a brain	A recipe card
Purpose	Memory across one area of work	Instructions for one repeatable task
Scope	Broad — an entire function or department	Narrow — one specific output or process
Portability	Stays put. Context is the point.	Goes anywhere. Portability is the point.
Lifespan	Always on. Grows over time.	Triggered on demand. Stays the same.

Five functions. Five *brains.*

Each project has its own files, instructions, and owner.

Land Operations	Hotel contracts, ground transport, local guides.
Airline Operations	Fare rules, group bookings, airline contacts.
University Programs	University contacts, academic calendars, templates.
Corporate Travel	Energy company clients, policies, billing.
Finance & Admin	Invoicing, QuickBooks, internal operations.

Project, Skill, or just a *chat?*

New *Project*

If Claude needs to ***remember*** *something — files, rules, ongoing context — it's a project.*

"Claude needs to know our Jordan vendors."

→ PROJECT

"Corporate clients need different rules from groups."

→ PROJECT

New *Skill*

If Claude needs to ***do*** *a task the same way every time, it's a skill.*

"I need to generate an invoice."

→ SKILL

"Follow-up email after every client call."

→ SKILL

Just a *chat*

If it's a one-off — a new trip, a single client, a quick question — start a chat inside an existing project.

"Baylor Malaysia trip needs planning."

→ CHAT IN UNIVERSITY PROGRAMS

"What's the cheapest way to move 42 students?"

→ CHAT IN AIRLINE OPS

Rule of thumb: if Claude needs to *remember*, that's a project. If Claude needs to *do*, that's a skill. Everything else is just a chat.

Sonnet is your default. Always.

FASTEST, LIGHTEST

Haiku

Quick lookups. Classification. Very high volume. Not enabled on your plan right now.

SKIP FOR NOW

YOUR DEFAULT. ALWAYS.

Sonnet 4.6

Handles all Millennium daily work. Client emails. Itineraries. Vendor comms. Contract summaries. Proposal drafts. If you are unsure, use Sonnet.

USE 95% OF THE TIME

MOST POWERFUL, USE SPARINGLY

Opus 4.7

Save for genuinely complex work. Multi-document contract analysis. Long-form strategy. Financial modelling across many files.

COMPLEX CONTRACTS ONLY
